## Throttle Grip Adjustment

The throttle grip free play should be 5-10° of the grip rotation. To adjust, proceed as follows:

1. Loosen the lock nut (A) and turn the adjuster. Turning the adjuster in direction (B) will decrease the free play, and turning it in direction (C) will increase the free play.

2. To make a fine adjustment, first remove the rubber cap from the throttle cable lower adjuster and turn the adjuster (D).

Turning the adjuster in direction (E) will increase the free play, and turning it in direction (F) will decrease the free play.

NOTE: After adjusting, tighten the lock nut securely. Open and close the throttle to check for smooth operation and proper closing.
