Exercise 2-1 Values in the last column of each row are the values of the random number. Define $N(t)$ as the total number of parts in the system (in queue plus in service) at time t . Set t below the area under $N(t)$ up to the event time at a row in the table, and $N(t)$ is the maximum value of $N(t)$ observed up to the event time in the row. Table 2-1 is then segmented as follows (the rows with any shaded cells).

| Time (Day) | Event | Value | Random Number | Event Calendar |
