Exercise 2-1 Answer the two questions (a) and (b) for the two systems (Systems 1 and 2).
Define $N(t)$ as the total number of parts in the system (in queue plus in service) at time t . Set $N(0)$ to the value under 'N(0)' in the event time at $t=0$ in the table, and N^* to the maximum value of $N(t)$ observed up to the event time in the row. Table 2-1 is then segmented as follows (the rows with gray shading).

Time (hr)	Event	System	State	$N(t)$	N^*	Event Calendar
