**Software Crisis**

During 1970s, large numbers of software projects failed mostly due to human factors. This problem was referred to as the "software crisis".

**Study by Comptroller General of the United States (1979):**

- 2% of software worked on delivery
- 3% worked only after some corrections
- 45% delivered, but never successfully used
- 20% used, only after major modification/ reworked
- 30% were paid for, never completed/ delivered

**Software Crisis led to Software Engineering**

**Software Engineering**

- Systematic approach to software development
- Application of engineering principles
- Provides a set of methods, tools, and procedures
- Ensures consistent software quality
