

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Using Thin Installer

To use Thin Installer, extract the executable from the Lenovo Support Web site and configure the path of the repository. To create the repository, see Chapter 5 "Working with Update Repository" on page 45. By default, the program searches for updates in a subdirectory under the Thin installer folder.

Figure 6. Default repository

To specify a different location, use the configuration file located in the Thin Installer folder or use the command line parameters.

Note: If the repository location is specified in both the configuration file and the command line, the command line will take higher precedence.

This installer requires administrative privileges. If Thin Installer is invoked by a software distribution agent, Thin Installer will run with the same privileges as the software distribution agent, which usually has administrative privileges.

The following table provides the command line scripts for Thin Installer. %INSTALLDIR% denotes the directories where the Thin Installer files are located.

Table 26. Command line scripts

Scripts	Description
%INSTALLDIR%\ThinInstaller.exe /Z %search C %update URL	Searches the default repository for critical update packages and notifies you with a balloon tooltip from the application icon in the notification area prior to installation.
%INSTALLDIR%\ThinInstaller.exe /Z %search R %update URL	Searches the default repository for critical and recommended update packages and installs those that do not contain a license agreement.

If you do not set the value in the `DefaultLicenseMode` configuration item to `NO`, you will be prompted to agree to a license agreement before the update package pack list is displayed.

You will be notified with a balloon tooltip from the application icon in the notification area after the update packages are installed.
